

The Stack

Every technology layer running right now. Built for one small business. Runs like a production engineering team.

CORE AI

Claude (Anthropic)

The brain — reasons, writes, strategizes, and makes judgment calls.

\$200–300/mo

Claude Code

Agentic coding tool that writes and deploys real software end-to-end from a single instruction.

Included

OpenClaw

The operating system connecting everything — gives Hans persistent memory, tools, scheduling, and messaging.

Free

Memory Files

Plain text files on the Mac mini that Hans reads every session — every decision, every person, every project. No starting over.

Free

HARDWARE & NETWORKING

Mac Mini (Apple Silicon)

Always-on local server — the physical computer Hans lives on. My hardware, my data.

Hardware (owned)

Cloudflare Tunnel

Permanent public URL so Hans is accessible from anywhere in the world — no port forwarding, handles HTTPS automatically.

Free

Tailscale

VPN mesh network for secure SSH access to the Mac mini from anywhere.

Free

Hetzner VPS

Backup server in Germany — monitors the primary tunnel and activates failover automatically in under 5 minutes.

~\$10/mo

GOOGLE SUITE

Google Suite

Gmail, Drive, Docs, Sheets, Calendar — all readable and writable. Hans Workspace plan doesn't just draft emails, he sends them.

Google Apps Script — v73

Serverless backend bridge — receives inspection data, creates Drive folders, logs to Sheets, and sends email alerts. No servers.

Free

INSPECTOR APP

Inspector App (PWA) — v199

Field data capture tool for inspectors — runs in a browser, installs on iPhone, works offline. Built entirely by AI.

Free (Netlify)

Supabase

PostgreSQL database and photo storage — inspector photos upload here first, then mirror to Drive.

~\$25/mo

Cloudflare Worker

Edge function that proxies Claude API calls from the inspector app — keeps API keys off the client.

Free tier

Netlify

Hosts the inspector app — auto-deploys on every GitHub push.

Free

COMMUNICATION & INPUT

WhatsApp + Whisper Flow

Voice-to-task interface — think out loud into WhatsApp and Hans handles the rest.

Free

Slack

Team communication surface — Hans runs as a bot here for team-facing work.

Existing plan

INFRASTRUCTURE

GitHub (InHausLab org)

Code hosting, version control, CI/CD, and deployment pipeline for all InHaus software.

Free

Backblaze

Continuous cloud backup of the entire Mac mini — insurance against hardware failure.

~\$9/mo

Total monthly infrastructure cost (everything except AI API calls)

~\$44/mo
